1. The microscope you will be using has a grid in the ocular lens like the one shown below.

2. Use a stage micrometer and determine the length transversed by the line indicated on your sheet with both the 10X objective and the 40X object.

3. You will be given a maximum time limit of 15 minutes.

Length of line:

10X objective: ____________________________

40X objective: ____________________________
